Keywords:

flipped classroom, Edmodo apps, creative thinking ability, a course of Indonesian language and Literature Study.

The study aims to investigate whether there is an influence of Edmodo apps in flipped classroom learning on the students' creative thinking ability in the course of Indonesian Language and Literature Study. This study is quasi experimental research that was held at the fourth semester students in Class A and Class B of primary teacher education in Universitas PGRI Madiun, Indonesia. Class A is as the experimental class and class B is as the control class. The population is chosen using cluster random sampling technique. This study uses instruments of creative thinking ability test. Techniques in collecting data are observations, documentations, and tests. The instrument is validated using content validation. The normality test uses Lilliefors model because the data is single data. The homogeneity test uses Chi Square formula. Hypothesis is tested using t-test. Based on the result of test decision and observations, it can be concluded that the use of edmodo apps in flipped classroom learning gives better influence to the students' creative thinking ability in the course of Indonesian Language and Literature Study.

1. INTRODUCTION

The course of Indonesian Language and Literature Study has been taught in primary teacher education. It includes morphological, semantic, phonological, and syntax studies. The core study is inseparable about grammar. It learns about the basics and processes of forming sentences in a language [1], [2]. Grammar does not only discuss about the formation of a sentence [3], [4], [5]. However, it also discusses about discourses, sentences, clauses, and phrases [6]. The result of Hasanudin's research shows that the novel entitled "*Sang Pencuri Warna* [The Colours Thief]" by Yersita contains syntactic elements such as phrases, clauses, and sentences [7]. It can be said that syntax competence includes the aspects of knowledge, skill, and mastery about language units (sentences, clauses, and phrases). These units have to be well-mastered by students. Therefore, they need to have creative thinking ability.

The creative thinking ability is the ability to find many possible answers to a problem [8]. The results of logical and divergent thinking are not only related to a good and interesting finding, but also the implementation of it [9]. A study by Hasanudin and Fitrianiingsih shows that students are able to think creatively in creating poems inspired by their personal experiences. They have a large vocabulary and are able to use correct diction. The use of it in accordance with personal experience make them think creatively in creating their own poems [10].

The indicators of creative thinking are fluency, authenticity, and elaboration [11]. In line with syntactic learning, the students who have good creative thinking are able to find the appropriate formation of grammar in a text based on their logical and divergent thinking. The research by Saddhono, Hasanudin, and Fitrianiingsih shows that at the level 4 of creative thinking ability, students are very creative in finding phrases and arrange it into compound sentences. By using their creativity, the students are able to give the correct answers about phrases of pictures in the application [12].

Learning is an effort to develop thinking creativity so that students can improve their knowledge and thinking ability [13]. Simon says that knowledge has a role in the formation of behavior [14]. In fact, the lack of students' abilities and the learning process that does not run well cause the students' learning outcomes are being low. The data found that 70% is determined by internal factor and 30% is determined by external factor (learning environment) [13]. The learning process that is not well managed, is strongly said as a cause of low learning outcomes, one of which is the learning method is less fun.

Flipped Classroom is the right solution for students in creating fun and effective learning method. It is a reversal of the traditional method. The traditional method is a condition in which the teacher explains the material in class and the students complete the assignment at home [15], [16]. In learning at the classroom, the students only carry out

discussion and complete the assignments from the lecturer [17], [18], [19].

The flipped classroom strategy has several advantages, such as more effective discussion activities and easier completion of students' assignments because more time is given and more flexibility in doing it [20]. Hasanudin, Fitrianiingsih, and Saddhono explain that flipped classroom learning with CyberLink Power Director media apps has already well referred to the negotiation text structure according to the Ministry of Education and Culture [21]. It also can be integrated with the Wondershare Filmora Version 7.8.9 media apps in learning 2013 curriculum in Indonesia by using a scientific approach [22].

Flipped classroom is very suitable to be implemented by using Edmodo web media because it is a fun online web that provides new experiences in learning [23]. Moreover, it can be quickly and easily accessed by students wherever and whenever they are [24]. In other word, the students can learn without being limited by space, time, and distance.

A study by Tania, Jumadi and Astuti reveals that the application of e-handout assisted by problem based learning model using Edmodo can improve the students' creative thinking ability [25]. Pertiwi, et.al. explains that Edmodo media can enhance students' mathematical proving ability as well as its achievement [26]. Furthermore, Çankaya, Durak, and Yünkül argue that Edmodo's contribution to learning as making learning fun appeared to be as attracting students' attention, appropriate for future students, making teachers work easier, making the lesson effective and organized [27]. Based on these studies, the researchers are eager to implement Edmodo apps to flipped classroom learning in the course of Language and Literature Study so they know how student's creative thinking ability is.

2. RESEARCH METHODOLOGY

This study is a quasi-experimental research. According to Sugiyono, quasi experimental design is a development of true experimental design, which is difficult to be carried out. It has a control group, but it cannot be totally used to control the external variables that influence the implementation of the experiment [28]. This research does not control or manipulate all relevant variables except for a few of the variables studied.

The study was designed by giving creative thinking test. It involved two groups of samples that were treated in different ways. The first group as the experimental class was taught in flipped classroom learning by using Edmodo apps. On the other hand, the second group as the control class was taught by using direct instruction. The design could be seen clearly in table 1.

Table 1. The Reasearch Design

Group	Treatment	The results of creative thinking test
Experimental class	X	T ₁
Control class	Y	T ₁

X = Flipped Classroom Learning by using Edmodo apps
 Y = Direct Instruction Learning

T₁ = Creative thinking test

2.1 Time and Place of Research

This research was conducted in the fourth semester students of Primary School Teacher Department, Faculty of Teacher Training and Education, Universitas PGRI Madiun, Indonesia. It was conducted in course of Indonesian Language and Literature Study.

2.2 Research Subjects

The research subjects were all fourth semester students of Primary School Teacher Department in A and B classes. The class A was used as an experimental class, and the class B is used as a control class. The researchers used cluster random sampling technique to determine the research sample. According to Sugiyono, it was a technique in which members of the population were taken randomly [29].

2.3 Research Instruments

The instruments of this research were a test of creative thinking ability on the course of Indonesian Language and Literature Study and the observation sheets. The creative thinking test was used to determine the students' ability to think creatively on the materials of Indonesian Language and Literature study. It was delivered after the students attained the materials in flipped classroom learning by using Edmodo apps. It was essay test that was consisted of 5 questions. The essay was used to determine the students' ability in thinking creatively viewed from the multiple answers given based on the indicators of creative thinking, i.e fluency, authenticity, and elaboration.

Another instrument was observation sheets that contained the assessment of students' activities in the learning process. The students' activities contained of the stages of flipped classroom learning by using Edmodo apps. It was check list form of the students' activities. The observation process was done by the observers, they were collaborators.

2.4 Data Collection Techniques

Techniques in collecting data used in this research were observation, documentation, and test techniques.

2.4.1 Observation

Observation is a technique that was done by deep monitoring and record-keeping sistematically [30]. This technique was carried out to maintain the learning process such as in the discussion and students' participations in it. The observation technique aimed to investigate the students' learning activities in flipped classroom learning using Edmodo apps. This observation was carried out using observation sheets and the observers.

2.4.2 Documentation

Documents were records of past events. It was in forms of writings, drawings, or monumental works of someone [28]. In this research, documentation technique was needed to find out the data of students' final scores in the third semester. It was used as a calculation of the empirical validity test.

2.4.3 Test

Test method was as a basis for knowing the students' ability in understanding the materials that had been given. According to Sugiyono, to facilitate the arrangement of instruments, the matrix of instrument development or blueprint was needed [28]. It meant that blueprint was a form of matrix that was developed to arrange questions into tests in accordance with the guidelines, clear, and detailed. The arrangement of test items were composed based on the blueprint that had been made. The test method used in this research was a test of creative thinking ability. It consisted of essays arranged by referring to the materials given.

2.5 Instrument Validity Techniques

Validity is a dimension to show that an instrument is acceptable. A valid instrument has a high validity. On the other hand, an invalid instrument has a low validity [31].

The technique of validating instrument in this research was content validity. It would like to examine the extent to which the items of instrument covered the entire content of the objects to be measured. In this case, the objects were indicators that were already listed in the blueprint [32]. This content validation was used to measure the validity of the creative thinking ability test. A question was valid when it had high validity. The validity test had to correlate the score of an item from the total score. To know the coefficient correlation of a question, the formula of Product Moment Pearson could be used [30].

$$r_{xy} = \frac{n\sum XY - (X)(Y)}{\sqrt{\{n\sum X^2 - (\sum X)^2\}\{n\sum Y^2 - (\sum Y)^2\}}}$$

r_{xy} = the coefficient correlation between X and Y variables

n = the number of students

X = the score of item

Y = the total score

To know whether the item of question was valid or not, it had to compared the results of r_{hit} and r_{tabel} Product Moment in $\alpha = 0,05$. If the result showed that $r_{hit} \geq r_{tabel}$, the item was valid. But, if the result showed that $r_{hit} < r_{tabel}$, the item was invalid.

Besides, another thing used to test the instruments was reliability. The reliability test used for the instruments of creative thinking ability test was the formula of Alpha Cronbach for the questions in form of essays. The reliability of an instrument was the accuracy of evaluation tool. A test could be said as reliable when it gave a constant result. To know the reliability test, the formula of Alpha Cronbach could be used [30].

$$r_{11} = \left[\frac{n}{(n-1)} \right] \left[1 - \frac{\sum \sigma_i^2}{\sigma_i^2} \right]$$

r_{11} = the reliability

n = the number of items

σ_i^2 = the number of varians scores in each item

σ_i^2 = the total varians

An instrument of research could be said reliable by using this technique when the coefficient reliability $r_{11} > 0,6$.

2.6 Data Analysis Technique

The techniques of analysing data were:

2.6.1 Prerequisite Analysis Test

The prerequisite analysis test in this research were normality and homogeneity tests. Tests for normality with Lilliefors model because the data was in form of single data. The homogeneity test used the formula of Chi Square.

2.6.1 Hypothesis Testing

After determining the values of normality and homogeneity, the normal and homogeneous data was used as a basis for testing the research hypothesis. T-test was used in this study. The hypothesis in this study was there is an influence of Edmodo apps in flipped classroom learning toward the students' creative thinking ability in the course of Indonesian Language and Literature study.

3. FINDINGS AND DISCUSSION

The aim of this research is to find out whether there is an influence of Edmodo apps in flipped classroom learning on the students' creative thinking ability in the course of Indonesian Language and Literature Study. In this study, the data were collected using two methods namely test and documentation methods. Test was used to investigate the students' creative thinking ability. Documentation was used to get additional data needed such as the students' attendance lists and results of final examination.

Furthermore, the researchers did the data analysis. The initial data analysis is prerequisite test which includes tests of normality and homogeneity. To find out whether the two classes are normally distributed or not, as well as homogeneous or not. After that, hypothesis testing is done by using t-test.

3.1 Prerequisite Test of Students' Scores

Prerequisite test includes normality and homogeneity tests on samples. The data comes from the test scores of students' creative thinking ability in the control class and the experimental class.

3.1.1 Normality Test

3.1.1.a Normality Test of Final Examination

This test is to find out whether the sample is normally distributed or not in both classes of samples (control class and experimental class). This test is By using the Lilliefors method with a significance level of 0,05, the the test results can be seen in table 2.

Table 2. The Analysis Results of Data Normality Test in Final Examination

Classes	$L_{observation}$	L_{table}	Test Decisions	Data Distributions
Control	0,1082	0,148	H_0 is accepted	Normal Distribution
Experimental	0,1202	0,148	H_0 is accepted	Normal Distribution

The amount of samples in both classes are $n_1 = 36$ with a significance level of $\alpha = 5\%$. The value of L_{hitung} is obtained from the formula $L = Maks|F(z_i) - S(z_i)|$. The critical area is $DK = \{L | L > L_{\alpha,n}\}$, based on the table of critical values Lilliefors, it is obtained $L_{0,05;36} = 0,148$. Samples come from the populations that are normally distributed when L_{hitung} is not in a critical area (DK) ($L_{observation} \notin DK$). Based on the test decisions, it is obtained that $L_{observation} < L_{table}$. It shows that each sample is normally distributed.

3.1.1.b Normality Test of Creative Thinking Test

This test is to find out whether the sample is normally distributed or not. By using the Liliefors method with a significance level of 0,05, the the test results can be seen in table 3.

Table 3. The Analysis Results of Data Normality Test

Classes	$L_{observation}$	L_{table}	Test Decisions	Data Distributions
Direct Instruction Learning Flipped Classroom	0,1161	0,148	Accepted	Normal Distribution
Learning by using Edmodo apps	0,1223	0,148	Accepted	Normal Distribution

The amount of sample in both groups is $n = 36$ with a significance level of $\alpha = 5\%$. The value of L_{hitung} is obtained from the formula $L = Maks|F(z_i) - S(z_i)|$. The critical area is $DK = \{L | L > L_{\alpha,n}\}$, based on the table of critical values Lilliefors, it is obtained $L_{0,05;36} = 0,148$. Samples come from the populations that are normally distributed when L_{hitung} is not in a critical area (DK) ($L_{observation} \notin DK$). Based on the test decisions, it is obtained that $L_{observation} < L_{table}$. It shows that each sample is normally distributed.

3.1.2 Homogeneity Test

3.1.2.a Homogeneity Test of Final Examination

Homogeneity test is used to determine whether the varians of both population are homogeneous or not. Testing between the two groups uses the Bartlet test with a significance level of 0,05. The results of homogeneity test can be seen in table 4.

Table 4. The Analysis Results of Data Homogeneity Test in Final Examination

Classes	$\chi^2_{observation}$	χ^2_{table}	Test Decisions	Conclusions
Control and Experimental	0,0196	3,841	H_0 is accepted	Homogeneous Samples

The significance level is $\alpha = 5\%$ and the amount of sample is $k = 2$. The critical area used is $DK = \{\chi^2 | \chi^2 > \chi^2_{\alpha, k-1}\}$, based on the value of χ^2 it is obtained that $\chi^2_{0,05;1} = 3,841$. The value of $\chi^2_{observation}$ is 0,0196 so $\chi^2_{observation}$ is not in the critical area ($\chi^2_{observation} \notin DK$). Based on the test decisions, the value of $\chi^2_{observation} < \chi^2_{table}$ it can be concluded that the samples come from the homogeneous population.

3.1.2.b Homogeneity Test of Creative Thinking Test

Homogeneity test is used to determine whether the population is homogeneous or not. Testing between the two groups uses the Chi Square test with a significance level of 0,05. The results of homogeneity test can be seen in table 5.

Table 5. The Analysis Results of Data Homogeneity Test

Classes	$\chi^2_{observation}$	χ^2_{table}	Test Decisions	Conclusions
Direct Instruction Learning and Flipped Classroom Learning by using Edmodo apps	0,12	3,841	Accepted	Homogeneous Samples

The significance level is $\alpha = 5\%$ and the amount of sample is $k = 2$. The critical area used is $DK = \{\chi^2 | \chi^2 > \chi^2_{\alpha, k-1}\}$, based on the value of χ^2 it is obtained that $\chi^2_{0,05;1} = 3,841$. The value of $\chi^2_{observation}$ is 0,12 so $\chi^2_{observation}$ is not in the critical area ($\chi^2_{observation} \notin DK$). Based on the test decisions, the value of $\chi^2_{observation} < \chi^2_{table}$ it can be concluded that the samples come from the homogeneous population.

3.2 Hypothesis Testing

The hypotheses of this study are:

H_0 : There is no influence of Edmodo apps on flipped classroom learning to the students' creative thinking ability in the course of Indonesian Language and Literature Study.

H_1 : There is an influence of Edmodo apps on flipped classroom learning to the students' creative thinking ability in the course of Indonesian Language and Literature Study.

The hypothesis testing is done using t-test formula. The results can be seen in table 6.

Table 6. The Analysis Results of Hypothesis Testing

Classes	$t_{observation}$	t_{table}	Test Decisions	Conclusion
Direct Instruction Learning and Flipped Classroom Learning by using Edmodo apps	-6,134	2,2906	H_0 is rejected	There is an influence

Based on the test decisions with a significance level of 0,05 it is obtained that $t_{observation} = -6,134$ while $t_{0,025; 70} = 2,2906$ and $DK = \{t | t < -2,2906 \text{ or } t > 2,2906\}$. It can be concluded that there is an influence of Edmodo apps on flipped classroom learning to the students' creative thinking ability in the course of Indonesian Language and Literature Study.

It can be concluded that there is a suitability between the test decision and research hypothesis which shows that the use of Edmodo apps in flipped classroom learning gives better influence on students' creative thinking ability rather than direct instruction learning.

3.3 Observation Results

Based on the result of observations, the implementation of Edmodo apps in flipped classroom learning in the course of Indonesian Language and Literature Study creates an average score of 70 for the control class's creative thinking ability, while the average score of experimental class is 81. The students' learning activities are included into good category for each indicator that is 75,69%; 72,74%; 70,65%; 74,65%; 73,09%; and 74,39%. So, there is an influence of Edmodo apps on flipped classroom learning to the students' creative thinking ability in the course of Indonesian Language and Literature Study.

The suitability of the test decisions and research hypothesis is due to the learning activities using Edmodo apps in flipped classroom leads the students to be able to develop their creative thinking ability. They can understand, identify, solve, and conclude the problems. Furthermore, they can work together, be responsible, and help each other in analysing and solving the problems faced in the course of Indonesian Language and Literature Study. Zainuddin says that the authors believe that the study on students' intrinsic motivation has been widely conducted in online community learning or emerging technology [33]. This is a cause of globalization era and free market causes many problems in every context of living [34].

A study by Serin and Khabibullin reveals that Edmodo apps can be used in flipped classroom learning to make students have online participations such as filling the diaries, surveys, and online tests [35]. Edmodo apps in flipped classroom learning is considered to be useful and effective because it can be used interactively to improve students' digital literacy skill [36].

4. CONCLUSION

Based on the results of research that has been done about the influence of Edmodo apps in flipped classroom learning on the students' creative thinking ability in the course of Indonesian Language and Literature Study, it is obtained that $t_{observation} \in DK$ yaitu $t_{observation} = -6,134$ and $DK = \{t | t < -2,2906 \text{ atau } t > 2,2906\}$, it can be concluded that the use of Edmodo apps in flipped classroom learning gives a better influence on the students' creative thinking ability in the course of Indonesian Language and Literature Study.

Subject: Final Proof of your paper submitted to ISI!
Importance: High

Dear author,

Before publication, it is decided that this final proof should be sent to the authors once again for careful reading and re-check, to rule out the mistakes / errors of all kinds.

Download “final proof”. Read them carefully with particular reference to the following points:

1. Check with care all the symbols in the text. If some corrections are left out, **highlight them** and attach notes on how to correct directly in the PDF file.
2. The pieces of literature with Arabic numerals in square brackets should not be acted as any element in a sentence. And citations must be in order in text.
3. No revision will be allowed after the final proof.

Please return the corrected final proof **Before 20 March 2020**.

It is our mutual responsibility that the academic works published in the journal should be “mistake or error free” and of quality as well. Our attention and efforts to this would make the journal still better, besides enhancing the utility of your published research.

Kind regards,

ISI Editorial Board

Article entitled:

The Use of Edmodo Apps in Flipped Classroom Learning. How is the Students' Creative Thinkin

Author/s:

Heny Kusuma Widyaningrum

Corresponding author (if more than one author):

Cahyo Hasanudin, Ayu Fitriyaningsih, Dwi Erna Novianti, Kundharu Saddhono, Nunung Supratn

Journal Name:

Ingénierie des Systèmes d'Information

Publisher:

International Information and Engineering Technology Association

1. Copyright Assignment

The author hereby grants the Publisher the exclusive license for commercial use of above article throughout the world, in any form, in any language, for the full term of copyright, effective upon acceptance for publication.

2. Author's Warranties

The author warrants that the article is original, written by stated author/s, has not been published before and it will not be submitted anywhere else for publication prior to acceptance/rejection by the Publisher, contains no unlawful statements, does not infringe the rights of others, is subject to copyright that is vested exclusively in the author and free of any third party rights, and that any necessary written permissions to quote from other sources have been obtained by the author/s.

3. User rights

This article, if accepted, will be an open access article distributed under the terms and conditions of the Creative Commons Attribution License (<http://creativecommons.org/licenses/by/3.0/>). Publisher will insert the following note at the end of the published text: © 2020 by the authors; licensee IIETA, Edmonton, Canada. This article is an open-access article distributed under the terms and conditions of the Creative Commons Attribution License (<http://creativecommons.org/licenses/by/3.0/>).

4. Rights of Authors

Authors retain the following rights:

- all proprietary rights relating to the article, other than copyright, such as patent rights,
- the right to use the substance of the article in future own works, including lectures and books,
- the right to reproduce this article for own purposes, provided the copies are not offered for sale.

An author may self-archive an author-created version of his/her article on his/her own website and or in his/her institutional repository. He/she may also deposit this version on his/her funder's or funder's designated repository at the funder's request or as a result of a legal obligation, provided it is not made publicly available until 12 months after official publication. Furthermore, the author may only post his/her version provided acknowledgement is given to the original source of publication and a link is inserted to the published article on <http://www.iieta.org>. The link must be accompanied by the following text: "The original publication is available also at <http://www.iieta.org>". He/she may use the Publisher's PDF version, which is posted on <http://www.iieta.org>, for the purpose of self-archiving or deposit. Any other use of the article requires permission from the Publisher.

5. Co-Authorship

If the article was prepared jointly with other authors, the signatory of this form warrants that he/she has been authorized by all co-authors to sign this agreement on their behalf, and agrees to inform his/her co-authors of the terms of this agreement.

6. Publication Fee

There is no publication fee.

7. Termination

This agreement can be terminated by the author or the Publisher upon two months' notice where the other party has materially breached this agreement and failed to remedy such breach within a month of being given the terminating party's notice requesting such breach to be remedied. No breach or violation of this agreement will cause this agreement or any license granted in it to terminate automatically or affect the definition of the Publisher. After the lapse of forty (40) years of the date of this agreement, this agreement can be terminated without cause by the author or the Publisher upon two years' notice. The author and the Publisher may agree to terminate this agreement at any time. This agreement or any license granted in it cannot be terminated otherwise than in accordance with this section 6.

8. Royalties

This agreement entitles the author to no royalties or other fees. To such extent as legally permissible, the author waives his or her right to collect royalties relative to the article in respect of any use of the article by the Publisher or its sublicense.

9. Miscellaneous

The Publisher will publish the article (or have it published) in the Journal, if the article's editorial process is successfully completed and the Publisher or its sublicense has become obligated to have the article published. The Publisher may conform the article to a style of punctuation, spelling, capitalization and usage that it deems appropriate. The author acknowledges that the article may be published so that it will be publicly accessible and such access will be free of charge for the readers. The Publisher will be allowed to sublicense the rights that are licensed to it under this agreement. This agreement will be governed by the laws of Canada.

10. Scope of the Commercial License

The exclusive right and license granted under this agreement to the Publisher for commercial use is as follows:

- a. to prepare, reproduce, manufacture, publish, distribute, exhibit, advertise, promote, license and sub-license printed and electronic copies of the article, through the Internet and other means of data transmission now known or later to be developed; the foregoing will include abstracts, bibliographic information, illustrations, pictures, indexes and subject headings and other proprietary materials contained in the article,
- b. to exercise, license, and sub-license others to exercise subsidiary and other rights in the article, including the right to photocopy, scan or reproduce copies thereof, to reproduce excerpts from the article in other works, and to reproduce copies of the article as part of compilations with other works, including collections of materials made for use in classes for instructional purposes, customized works, electronic databases, document delivery, and other information services, and publish, distribute, exhibit and license the same.

Where this agreement refers to a license granted to the Publisher in this agreement as exclusive, the author commits not only to refrain from granting such license to a third party but also to refrain from exercising the right that is the subject of such license otherwise than by performing this agreement.

The Publisher will be entitled to enforce in respect of third parties, to such extent as permitted by law, the rights licensed to it under this agreement.
